

1. EXECUTIVE SUMMARY

The operating story is clear: fix availability and low-productivity stores first; do not scale the display test yet.

Five metrics carry the decision. The test signal is not strong enough, while productivity and availability risks are already material.

Recommendation: pause full rollout, run a balanced second test, and launch daily operating controls for stock gaps and store productivity.

- Electronics represents 52.6% of net item sales, so small product issues move the full region.
- Sales gap signals add up to \$59,498,062 estimated lost sales; the top category is Electronics.
- A/B direct result is negative (-17.0% lift, p-value 0.241); design balance is weak.

2. STORE PERFORMANCE

Comparable sales show where formats and stores are moving, but productivity varies sharply inside each format.

The view below separates growth from efficiency so regional actions can be assigned by store.

Best comparable stores

Store	Format	Growth	Current
TIENDA_036	EXPRESS	27.4%	\$138,259
TIENDA_040	EXPRESS	23.1%	\$168,709
TIENDA_029	DESCUENTO	18.8%	\$243,341
TIENDA_013	SUPERMERCADO	15.9%	\$419,771

Worst comparable stores

Store	Format	Growth	Current
TIENDA_025	DESCUENTO	-8.0%	\$220,420
TIENDA_009	SUPERMERCADO	-5.7%	\$352,803
TIENDA_022	SUPERMERCADO	-5.1%	\$343,847
TIENDA_031	DESCUENTO	-3.8%	\$227,818

3. OPPORTUNITIES

The improvement pool is practical: ten low-productivity stores, low margin-return vendors, and loyalty retention after first purchase.

These actions can start without waiting for a new platform or extra tooling.

PRODUCTIVITY

10 stores

Below 25th percentile inside format.

MARGIN RETURN

120

Vendor-category combos below 1.

MONTH 1 RETENTION

66.3%

Large early loyalty cohorts.

ACTIVE GAPS

5,597

Open store-product signals.

Low-productivity stores by format

SUPERMERCADO	4
DESCUENTO	3
HIPERMERCADO	2
EXPRESS	1

Lowest margin-return vendor/category pairs

Vendor	Category	Return	Margin
VND_022	Toys	0.30	\$19,837
VND_017	Home	0.30	\$86,994
VND_002	Beverages	0.30	\$12,972
VND_021	Personal Care	0.31	\$4,315
VND_016	Beverages	0.31	\$10,327

Management implication

Weekly productivity routines should start with the bottom 10 stores; vendor reviews should focus on return below 1; loyalty should trigger a second purchase before month one drops.

4. RISKS

The analysis is usable, but the business should act with clear risk controls: data quality, experiment balance, and stock-gap interpretation.

Each risk has a measurable control that can be checked before a VP-level rollout decision.

DATA MISMATCH

1,745

Transactions differ from item totals.

MISSING VENDOR

5

Products point to unknown vendor.

A/B CONFLICT

2

Stores in both variants.

PRICE ISSUE

231

Items at zero price without promo.

Estimated lost sales by category

Electronics	\$31,254,439
Home	\$13,896,242
Apparel	\$4,702,480
Food	\$3,320,043
Toys	\$3,055,006

Experiment balance check

Metric	Control	Treatment
Pre sales	\$17,545.86	\$12,999.27
Test sales	\$16,460.20	\$13,665.22
Transactions	59.0	49.8
Ticket	\$278.65	\$273.52
Store size	3100	1813

Direct sales difference is \$-2,794.97, p-value 0.241. Difference-in-differences is \$1,751.62, p-value 0.004, so I would repeat the test with a balanced design.

5. RECOMMENDATIONS

The next plan is a controlled operating rollout, not a dashboard-only handoff.

Each action includes owner, timing, and the number that proves whether it worked.

30 days

- Operations: action plan for the bottom 10 productivity stores.
- Supply Chain: daily alert for top 20 Electronics products.
- Data: fix 5 missing vendor links and zero-price exceptions.

60 days

- Merchandising: repeat A/B test by format and store size.
- Target: p-value below 0.05 or positive profit after implementation cost.
- Add inventory data to confirm real stock-outs.

90 days

- Regional Operations: certify productivity score every week.
- Data team: publish metric owner and reconciliation rules.
- VP review: scale only stores/categories that clear the decision gate.

Final call: do not scale the display now. Run the balanced test, reduce the \$59,498,062 sales-gap risk, and move the bottom 10 stores above their format threshold.
